

Phase 1 — Testing Scope & Admin Access Request

This note accompanies the Phase 2 membership-workflow requirements (submitted separately) and clarifies the current testing scope for the platform: what has been possible to verify, what has not, and the access required to complete Phase 1 verification.

Completed to Date

- Aesthetic, layout, and content review of the public website across multiple pages, in both Arabic and English.
- Ran the Phase 1 functional & compliance checklist (36 cases): **9 Pass, 2 Fail, 23 blocked pending admin access, 2 pending**. The blocked cases are all admin-gated (CMS, registration review, RBAC).
- Re-verified the 30 earlier Phase 1 findings against the updated build: **11 confirmed fixed** (security headers, robots.txt, split name fields, expanded nationality list, age limits, community link, upload size cap, API validation 400-not-500, corrected news images, mobile country-code selector, and unlinked pages now redirecting to canonical pages), **5 partially addressed** (including the calendar year-grid), **3 still open** (minor server-hardening and launch-time items), and **11 pending live UI / admin verification**.

Not Yet Verifiable — and Why

Functional (end-to-end) and compliance testing cannot be performed because there is currently no accessible admin dashboard for the Phase 1 modules — **CMS, Basic Registration, and the Sports Activities Calendar**. Testing so far has therefore been limited to visual/content and passive checks only.

For clarity: the Phase 2 Federation Operations dashboard (membership approvals) is understood to be in progress and is unblocked by the attached workflow requirements. This request concerns the Phase 1 admin and control that was part of the Phase 1 scope and should already be accessible.

Access Requested to Complete Phase 1 Verification

- The admin dashboard URL for the Phase 1 modules (**CMS / registrations / calendar**).
- One admin account, plus one account for each defined role, for permission testing.
- A test environment where end-to-end flows can be run without affecting production data.

Acceptance Note

Phase 1 cannot be accepted on visual review alone. Functional and compliance verification — feature behaviour, role-based access control, data protection, notifications, and bilingual and accessibility compliance — require the access above.

Until it is provided, **Phase 1 is visually reviewed but not functionally accepted**.

A Phase 1 functional & compliance test checklist is attached, setting out the cases that will be run once access is granted.
